Dear sir or madam:

Jersey Central Power and Light Co. has contracted Jaflo Tree service to complete the vegetation maintenance on the 34.5 kv transmission lines on your property. Enclosed is a property owner's contact form. **Please complete, sign and return the form to us.** A self-addressed stamped envelope is enclosed for your convenience.

JCP&L requires Jaflo to reclear the existing access path or roadway on the Right of way floor to a 15' width. If there is no existing access we will clear a 15' path. A five foot clearing will be cut around each pole or structure. **The Right of Way floor will be treated with a herbicide or mowed to control all woody vegetation. The herbicide work will be completed between June and September.** The desired effect will be a grassy corridor abutting the large wooded tree edge. The remainder of the work may be completed in separate operations throughout the calendar year. All healthy trees on the large wooded tree edge with limbs growing within 20' of the wires will be pruned back to the main stem.

Trees on the edge of the right of way corridor endangering the line due to an unhealthy condition or lean toward the wire will be taken down. All felled trees will be limbed and the wood will be separated and cut into manageable pieces. The limbs will be placed on the edge of the right of way in piles.

If you have any questions or concerns please call 1-570-594-0406 and leave your name, address and phone number and I or one of our vegetation management specialists will contact you to further explain.

Sincerely,

Greg Sullivan -Jaflo Inc
